The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcome amples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcome. The method of the invention has cytostatic and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           121 LeuMetTrpValPheThrTyrValGlyAlaLeuPheAsnGlyLeuThrLeuLeuIleLeu 140

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a method for diagnosing, or evaluating progression of, a neuromuscular disease. The method comprises detecting modulation of the expression of a product (I) of the RTN (reticulon)3 gene. Differential expression of RTN3 is a specific marker of neuromuscular disease, allowing early diagnosis from readily available muscle biopsies. The method is also useful for determining the efficacy of reatment. The method is used to diagnose (also to evaluate progression or therapy of) neuromuscular disorders, specifically amyotrophic lateral sclerosis (ALS) and myopathy. Also (i) antibodies specific for isoforms of RTN3 or oligonucleotides (antisense sequences or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Diagnosing, prognosing and monitoring neuromuscular disease, particularly amyotrophic lateral sclerosis, comprises detecting modulation of the reticulon 3 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            small interfering RNA) that can bloc \bar{k}/reduce expression of these isoforms are useful for treating neuromuscular diseases and (ii) cells that express RTN3 are useful in screening for therapeutic agents. The present sequence is a RTN3 DNA sequence used to illustrate the invention.

The present invention describes an isolated tumour-associated antigenic target (TAX) muclaci acid comprising: (a) any of 4622 nucleotide compensation to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that which disse to (a)-(c). Also described: (1) an expression vector comprising the above expression vector comprising the above expression vector; (3) approcess for producing a polypeptide; (b) an isolated polypeptide comprising the above expression vector; (3) a process for producing a polypeptide; (b) an amino acid sequence encoded by any of the above comprising the above expression vector; (a) an expression of the above expression vector; (b) an amino acid sequence encoded by any of the above comprising the above polypeptide; (b) an amino acid sequence encoded by any of the above comprising the above polypeptide; (a) an isolated polypeptide; (b) an amino acid sequence encoded by the full-comparising the above polypeptide; (a) an isolated polypeptide; (b) an amino acid sequence encoded by the full-comparising the above polypeptide; (b) an amino acid sequence encoded by the full-comparising the above polypeptide; (b) an isolated oligopeptide or (TAY binding organic molecule that binds to the above (mineric polypeptide; (d) an isolated oligopeptide; (d) an isolated oligopeptide or TAY binding organic molecule, in combination of matter compaining the composition of matter contained within the container; (l1) an article of manination organic molecule, in composition of matter contained within the container; (l2) amethod of composition of matter contained within the container; (l2) amethod of composition of matter contained within the container; (l2) amethod of containing a maning an amend of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a

The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% sequence identity to (a) -(c); or (e) a sequence that hybridises to (a) -(c). Also described: (1) an expression vector comprising the above nucleic acid; (2) a host cell comprising the above expression vector; (3) a process for producing a polypeptide; (4) an isolated polypeptide comprising: (a) an amino acid sequence encoded by any of the above nucleotide sequences; (b) an amino acid sequence encoded by the full-82 GluGluLeuValGlnLysTyrSerAsnSerAlaLeuGlyHisValAsnCysThrIleLys 101 102 GlubeuargargbeuPhebeuValaspaspleuValaspSerbeuLysPheAlaValbeu 121 141 161 GAACTGCTCATTTTCAGTGTCCCGATTGTCTATGAGAAGTACAAGACCCAGATTGATCAC 480 TyrLeuGlyLeuAlaAsnLysAsnValLysAspAlaMetAlaLysIleGlnAlaLysIle 181 human; tumour-associated antigenic target; TAT; cytostatic; gene therapy; cancer; cell proliferative disorder; gene; ss. length coding region of the above nucleotide sequences; or (c) a sequence comprising the above polypeptide fused to a heterologous polypeptide; (6) an isolated antibody that binds to the above polypeptide; (6) an isolated antibody that binds to the above polypeptide; (7) a process for producing the antibody; (8) an isolated oligopeptide that binds to binding organic molecule that binds to the above polypeptide; (7) a composition of matter comprising the above (chimeric) polypeptide; (7) a composition of matter comprising the above (chimeric) polypeptide; (7) an article of manufacture comprising a container and the composition of matter contained within the container; (12) methods of the composition of matter contained within the container; (12) methods of the composition of matter contained within the container; (12) methods of the growth of a cell that expresses the above protein; where the growth of the cell is at least in part dependent upon a growth contraining effect of the above protein; (13) a method of determining the protein contraining the protein and sample suspected of containing the protein containing the protein containing the protein and mammal; (16) a method for treating or preventing a cell proliferative disorder associated with increased expresses the protein described above corganic molecule to a cell that expresses the protein described above corganic molecule to a cell that expresses the protein described above corganic molecule to a cell that expresses the protein described above. The TAT sequences have cytostatic and city for a cell that composition is a nethod of the protein for described above. The TAT sequences have cytostatic and city for a cell that expresses the protein described above. The TAT sequences have cytostatic and city is and on the described above. The presence of a protein method are useful for dispositing the protein and in gene containing the protein described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       preventing or treating cancer. The composition is also used for preparing a medicament for the therapeutic treatment or diagnostic detection of a cell proliferative disorder or cancer. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           human TAT cDNA sequence from the present invention.

The present invention describes an isolated tundur-associated antigenic target (TAT) nucleic acid comprishing: (a) any of 4622 nucleotide acromptement of (a) or (b); (d) a sequence that has 80% sequence that those 80% or (a); (c) the complement of (a) or (b); (d) a sequence that has 80% sequence identity to (a) -(c); or (e) a sequence that hybridises to (a) -(c). Also described: (1) an expression vector comprising the above nucleic acid; (2) a host cell comprising the above expression vector; (3) a process for producing a polypeptide; (4) an isolated polypeptide comprishing: (a) an amino acid sequence encoded by any of the above comprishing: (a) an amino acid sequence encoded by the full-clength coding region of the above nucleotide sequences; or (c) a sequence comprishing the above polypeptide; (d) an amino acid sequence of a process or (c) a sequence comprishing the above polypeptide fused to a heterologous polypeptide; (d) a process or producing the antibody; (8) an isolated antigenic target (TAT) a process for producing the antibody; (8) a tumour-associated antigenic target (TAT) a composition of matter comprising to the above polypeptide; (1) a process or producing the antibody; (8) an isolated antigenic target (TAT) a composition of matter comprising the above polypeptide; (1) a matter comprising the above polypeptide; (1) a matter comprising the above protein; (1) an article of manufacture comprising a container of the cell is at least in part dependent upon a growth che composition of matter contained within the container; (12) methods of the cell is at least in part dependent upon a growth che composition of matter contained within the containing the protein of a cell that above protein; (11) a method of determining the protein in a sample suspected of containing the protein in a sample suspected of containing the protein in a sample suspected of containing the fundamental general part or presence of a protein in a sample suspected of containing the fundamental part or presence of a protein in a semple
human; tumour-associated antigenic target; TAT; cytostatic; gene therapy; cancer; cell proliferative disorder; gene; ss.

disorder associated with increased expression or activity of the above protein; and (17) a method of binding an antibody, oligopeptide or organic molecule to a cell that expresses the protein described above. The TAT sequences have cytostatic activities, and can be used in gene therapy. The composition and methods are useful for diagnosing, preventing or treating cancer. The composition is also used for preparing a medicament for the therapeutic treatment or diagnostic detection of a cell proliferative disorder or cancer. The present sequence represents a

The present live for an describes an isolated cumour associated antigenic target (TAT) nucleic acid comprising; (a) any of 4622 nucleotide sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% equence complement of (a). Or (b) a sequence that has 80% of comprising the above expression vector; (a) a notice or a process for producing a polypeptide; (4) an isolated polypeptide comprising; (a) an amino acid sequence encoded by any of the above comprising; (a) an amino acid sequence encoded by the full-length coding region of the above nucleotide sequences; or (c) a sequence comprising the above polypeptide; (b) an amino acid sequence encoded by the full-comprising the above polypeptide fused to a heterologous polypeptide; (6) an isolated antibody that binds to the above polypeptide fused to a heterologous polypeptide; (6) an isolated antibody that binds to the above polypeptide; (7) a process for producing the antibody; (8) an isolated onlypeptide; (7) a process for producing the antibody; (8) an isolated onlypeptide; (7) a process for producing the antibody; (8) an isolated onlypeptide; (10) a composition of matter comprising to the above polypeptide or TAT binding organic molecule, in combination with a carrier; (11) an article of manufacture comprising a container and the composition of matter contained within the container; (12) methods of inhibiting the growth of a cell that expresses the above protein; (13) a method of cells that express the above protein; (14) a method of cells that expresses the above protein; (14) a method of cells that express the above protein; (14) a method of cells that express the above protein; (14) a method of containing the protein in a sample suspected of containing the protein as ample suspected of containing the protein in a sample surpression or method of containing a container.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       mammal; (16) a method for treating or preventing a cell proliferative disorder associated with increased expression or activity of the above protein; and (17) a method of binding an antibody, oligopeptide or organic molecule to a cell that expresses the protein described above. The TAT sequences have cytostatic activities, and can be used in gene therapy. The composition and methods are useful for diagnosing, preventing or treating cancer. The composition is also used for preparing a medicament for the therapeutic treatment or diagnostic detection of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes an isolated tumour-associated antigenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid molecule and encoded polypeptide, for diagnosing, preventing or treating cell proliferative disorders such as cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             C; 456 G; 696 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2250

The present invention relates to a method for predicting a toxic effect
of a compound. The method comprises preparing a gene expression profile
of a tissue or cell sample exposed to the compound, and comparing the
differential expression of the gene indicates at least one toxic effect.

The method is useful for predicting at least one toxic effect of a compound, identifying an agent that modulates the onset or
progression of a toxic response, predicting the cellular pathways that a compound modulates in a cell, and identifying an agent that modulates at least one activity of a protein. The method and compositions of the present invention using a database of genes having liver toxin-induced differential expression, are useful in identifying toxicity markers in liver tissues or cells for drug screening and toxicity assays. Note: The sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed profile to the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of t

Predicting a toxic effect of a compound, useful in identifying toxicity markers in liver tissues or cells for drug screening and toxicity assays, comprises preparing gene expression profile of tissue or cells exposed to the compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              446
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 506

The method comprises detecting modulation of the expression of a product (I) of the RTM (reticulon)3 gene. Differential expression of RTM3 is a specific marker of neuromuscular disease, allowing early diagnosis from readily available muscle biopsies. The method is also useful for determining the efficacy of treatment. The method is used to diagnose (also to evaluate progression or therapy of) neuromuscular disorders, specifically amyotrophic lateral sclerosis (ALS) and myopathy. Also (i) antibodies specific for isoforms of RTM3 or oligonucleotides (antisense sequences or small interfering RNA) that can block/reduce expression of these isoforms exr useful for treating neuromuscular diseases and (ii) cells that express RTM3 are useful in screening for therapeutic agents. The present sequence is a RTM3 DNA sequence used to illustrate the invention.

The present invention relates to a method for diagnosing, or evaluating progression of, a neuromuscular disease. The method comprises detecting modulation of the expression of a product (1) of the RTN (reticulon)3 gene. Differential expression of RTN3 is a specific marker of method is allowing early diagnosis from readily available meucle biopsies. The method is also useful for determining the efficacy of treatment. The method is used to diagnose (also to evaluate progression or therapy of) neuromuscular disorders, specifically comportension or therapy of) neuromuscular disorders, specifically specific for isoforms of RTN3 or oligonucleotides (antisense sequences or small interfering RNA) that can block/reduce expression of these isoforms is mail interfering neuromuscular diseases and (ii) cells that express RTN3 are useful in screening for therapeutic agents. The present sequence is a RTN3 DNA sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1941
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |||:::|||||||||||::

The present invention relates to a method for diagnosing, or evaluating progression of, a neuromuscular disease. The method comprises detecting modulation of the expression of a product (1) of the RTM (reticulon)3 gene. Differential expression of RTM3 is a specific marker of neuromuscular disease, allowing early diagnosis from readily available muscle biopsies. The method is also useful for determining the efficacy of treatment. The method is used to diagnose (also to evaluate progression or therapy of) neuromuscular disorders, specifically amyotrophic lateral sclerosis (ADS) and myopathy. Also (1) antibodies specific for isoforms of RTM3 or oligonucleotides (antisense sequences or small interfering RTM3) that can block/reduce expression of these isoforms small interfering neuromuscular diseases and (ii) cells that express RTM3 are useful in screening for therapeutic agents. The present sequence is a RTM3 DNA sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Diagnosing, prognosing and monitoring neuromuscular disease, particularly amyotrophic lateral sclerosis, comprises detecting modulation of the reticulon 3 gene.

                                                                                                                                                                                         The present invention relates to a method for diagnosing, or evaluating progression of, a neuromuscular disease. The method comprises detecting modulation of the expression of a product (I) of the RTN (reticulon)3 gane. Differential expression of RTN3 is a specific marker of neuromuscular disease, allowing early diagnosis from readily available muscle biopsies. The method is also useful for determining the efficacy of treatment. The method is used to diagnose (also to evaluate progression or therapy of) neuromuscular diseases, specifically amyotrophic lateral sclerosis (ALS) and myopathy. Also (i) antibodies specific for isoforms of RTN3 or oligonucleotides (antisense sequences or small interfering RNA) that can block/reduce expression of these isoforms are useful for treating neuromuscular diseases and (ii) cells that express RTN3 are useful in screening for therapoutic agents. The present sequence is a RTN3 DNA sequence used to illustrate the invention.
Diagnosing, prognosing and monitoring neuromuscular disease, particularly amyotrophic lateral sclerosis, comprises detecting modulation of the reticulon 3 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          82 GluGluLeuValGlnLysTyrSerAsnSerAlaLeuGlyHisValAsnCysThrIleLys 101

The present invention relates to a method for diagnosing, or evaluating progression of, a neuromuscular disease. The method comprises detecting modulation of the expression of a product (1) of the RTN (reticulon)3 gene. Differential expression of RTN3 is a specific marker of neuromuscular disease, allowing early diagnosis from readily available muscle biopsies. The method is also useful for determining the efficacy of treatment. The method is used to diagnose (also to evaluate progression or therapy of) neuromuscular disorders, specifically amportory isoforms of RTN3 or oligonucleotides (antisense sequences or small interfering RNA) that can block/reduce expression of these isoforms are useful for treating neuromuscular diseases and (ii) cells that express RTN3 are useful in screening for therapeutic agents. The present sequence is a RTN3 bNA sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Diagnosing, prognosing and monitoring neuromuscular disease, particularly amyotrophic lateral sclerosis, comprises detecting modulation of the reticulon 3 gene.
                                                                                                                                                                                                                                        Neuroprotective; Myotropic; neuromuscular disease; RTN3; reticulon 3; amyotrophic lateral sclerosis; ALS; myopathy; human; gene; ds.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description
